Abisko

CLINF Stakeholder Workshop

Abisko Scientific Research Station (near Kiruna, Sweden)

start: 3 Dec in the evening

end: 5 Dec after lunch

In the North, climate change will increase the pressure from infectious diseases in humans and in animals. This will not only affect public health, but also the economy and the culture of northern societies.

The **CLINF Nordic Centre of Excellence** models future climate and disease scenarios and develops decision support tools for Northern societies, with the aim to help them in adapting to the changing conditions.

At this workshop we invite

representatives from municipalities, public health and veterinary authorities, reindeer herding/sheep farming organisations, tourism businesses and ethnic communities from Greenland to Russia

to discuss our latest research results on projected changes in disease distribution and on adaptation strategies.

This is an opportunity

- *To connect with other stakeholders*
- *To share your views on the challenges ahead*
- *To participate in producing new knowledge*
- *To take part in developing the CLINF Global Information System*

The event is free of charge; accommodation and meals are provided. Travel costs for invited participants will be covered by CLINF (instructions to be provided later). The working language is English, but we will provide translation to Scandinavian languages, when desired.

Are you interested? Please write to Svenja.stoven@umu.se before **17 September** (subject **CLINF Stakeholder Workshop**).
