

Climate change effects on the epidemiology of infectious diseases and the impacts on Northern societies

Climate sensitive infections: Societal impacts and adaptation needs

Grete Hovelsrud

Nord University, Norway

Adaptation challenge: Supplementary feeding

- Increased risk of disease exposure
- Risk of loss of traditional knowledge on how to avoid disease

One case area: Nordland – Northern Norway

Adaptation challenge – Migrations to coastal pastures

- Increases risk of exposure to ticks-borne diseases

Adaptation challenge: Societal infrastructure

- Institutional/structural constraints
- Mobility restrictions
